Abhin gude ag8556- (Project partner)

Since the first draft of the project to model the ER diagram most of the work is done together by both of us, in the first part. In the second part of the project finding the data or generating the data for some tables is done by me. Report of the project, PPT of the project is also mostly done by me and my project partner oversaw everything. Apart from the data collected on the internet my partner wrote python scripts for filling out the data for attributes like rating , id's , experience , salaries etc...,. Coming to Postgres queries and implementation. The total hours we spent on the project was spent together, including the final part 2. Making sure everything is working fine on the local network and also making sure it is working fine on jedi. Most of the queries and the streamlit part is implemented by my project partner. Debugging part is done by me . I contributed to a few of them while working on perfecting the report and the ER diagram presentation.
